

What's a Connected Business?

Smart sensor technology monitors your business property for potential hazards.

Wireless technology connects sensors to provide real-time alerts and analytics.

Connected businesses use data and alerts to mitigate losses and improve efficiency.

What smart sensors can do for business

Type of sensor	What it does
Water detection	Alerts when there's a presence of water and potential for flooding
Water monitoring	Tracks water usage so a business owner can know what's average/normal for their operation and detect abnormalities to address a possible leaking appliance
Door open/close	Monitor for door use while away from the business or track foot traffic while open for business.
Electrical monitoring	Detect surges or abnormalities in electrical flow which could indicate an issue.
Temperature	Monitor and alert if temperature goes outside range specified to prevent spoilage.
Other sensors	New sensors are being introduced all the time.

How a connected business can benefit

- Reduce risk of loss, potentially leading to lower insurance premium and discounts.
- Mitigate actual losses by knowing about potential issues quickly.
- Provide them peace of mind in knowing that leaks, temperature fluctuations and opened doors can be remotely detected.
